INTRODUCTION:

This is one of the standard print-outs of the Family Tree Maker Genealogical Software.

The Introduction and Index are edited in.

The Señeris clan in Tanjay/Dumaguete area had forebears that originally came from Capiz, in the municipalities of Mambusao and Ibajay. Three brothers (Ramon, Feliciano & Alberto) settled in Tanjay when their uncle, Fr Baldomero Villareal was the local parish priest in the mid 1920's.

The family data was encoded and merged into the Database containing information from many other sources. A significant portion is from the Villareal Family Tree which is much inter related to the Señeris clan. A good portion of the Señeris data was from kin who had settled in Mindanao, such as Rey Señeres in NJ, who maintains the "Barangay Señeres" website on Facebook. Another source was the late Dr Rene Tirol in Canada who already had made extensive research on the clan dating back to the late 1700's.

Some of the linking of these early forebears is conjectural, and only after more research on definitive sources such as church or municipal records of that era will more accuracy be assured

A recent series of emails from Frederick Joseph "Joey" R. Señeres accounted for some updates on his branch which involved additions and deletions.

Unique in this database is that each individual has been assigned a birth year, which is an educated guess based on date interpolation using assumptions of sibling spacing, and child-bearing years. Such dates are prefixed by Abt (about). Where an exact date is known, the birth years of the siblings, parents and children are adjusted accordingly. Still, many of the dates may be significantly off, since the order of births of siblings may be inaccurate, and/or incomplete.

The Database is a project to trace the inter-relational linkages between major families in the area, by bloodline and marriage.

The format of the print-out is as follows:

1. Arabic numeral prefix to each name is a unique number for each individual.
2. Names with a hash # prefix means that the name will appear again in later generations, in reference to their children.
3. Roman numeral prefix is the order of birth for siblings.
4. Small superscripted numbers indicate generational level of individuals.
5. Parenthesized names after emboldened name are forebears or bloodline of individual.
6. All years shown are estimated date of births (DOB) when prefixed by Abt (about).
7. Where full names are unknown, XXX are used.

We enjoin the clan members to make corrections/updates as may deem fit, such as filling in the correct names, DOBs, additional children and/or siblings, preferred deletions, etc. If sent back to <ferngil@aol.com>, we will update the database and reissue a new printout.

Next portion is the index which lists all the members alphabetically, and their corresponding reference number.

A simpler but interactive version of the family tree is posted on the internet with link below:
